

The proposed project would create opportunity for more recreational amenities for the community in Mead. A 1.6 mile looped trail that ties into the Trails Masterplan would encircle the eastern portion of the site. A community park area adjacent to Mead Ponds would provide for a large community gathering place with the potential for programed activities such as a dog park, pickleball courts, and a community garden. In addition, parking including electric charging stations may also be incorporated into the site. These renderings show the potential these areas can offer the residents of Mead.
